EXPERIENCE

Laddrr

Freelancer

Remote

Sep 2025 - Present

- Built a fullstack B2B SaaS platform for Taxocity, a legal and tax compliance services company, featuring multiple workflows for document processing and client management.
- Implemented secure payment infrastructure with Razorpay, one-time token system for post-payment operations and automated payment confirmation emails via Resend.
- Built multi-channel lead management system integrating Google Sheets API and TeleCRM via Next.js API routes.
- Developed a markdown-based blog with a Git-driven content workflow via PR submissions, improving SEO and performance.

Router Protocol

Frontend Engineer

Remote

Sep 2023 - Sep 2025

- Developed **Nitro Explorer**, a cross-chain blockchain explorer, independently architecting and implementing the interface from concept to production. Integrated GraphQL APIs for blockchain data fetching via efficient query patterns and caching strategies to handle high-frequency transaction updates.
- Enhanced multi-chain wallet SDK, **tangled** by integrating Bitcoin, Ton and Near support and implemented optimizations. Integrating multiple blockchain wallets expanded the platform accessibility.
- Optimized transaction flows for cross-chain operations which significantly improved user experience and reduced abandonment rates on **Nitro app**.
- Collaborated with backend teams to design and implement RESTful and GraphQL APIs, ensuring efficient data transfer between frontend applications and blockchain services.

Router Protocol

Frontend Engineer Intern

Remote

May 2023 - Sep 2023

- Developed a gamified NFT application leveraging Router Protocol's cross-chain architecture, enabling users to mint and level up NFTs by bridging between networks.
- Built smart contract integration for a cross-chain lottery system with rewards distribution on Polygon.

EDUCATION

RCC Institute of Information Technology

B.Tech Applied Electronics & Instrumentation Engineering GPA: 9.29

Kolkata, West Bengal

Aug 2019 - Jul 2023

PROJECTS

Nitro Explorer V2 Next.js, React Query, TailwindCSS, Zustand, Typescript, GraphQL

- Independently rebuilt an internal version of Nitro Explorer with a focus on performance and UX, achieving up to 99 Lighthouse performance score (previous max: 65).
- Crafted a blazing-fast explorer experience by implementing a command based search and non-blocking data states to eliminate layout shifts and improve perceived latency.
- Architected GraphQL data layer using React Query for optimistic updates, query deduplication, and automatic cache invalidation across blockchain transaction states.

Cracked ui components React, Typescript, viem

- Developing a comprehensive component ecosystem for web3 applications, accelerating developer integration time by 50-60% and can be used across multiple applications with consistent design patterns.

Whispr room Next.js, Convex, React Query, TailwindCSS, Typescript

- Built a real-time chat app with ephemeral rooms using Convex for live state synchronization, user presence tracking, system event broadcasting and graceful room expiration handling.

SKILLS

Languages:	TypeScript, JavaScript
Frameworks:	React.js, Next.js, Node.js, Express, Tanstack Start, Vite, Vitest, ShadcnUI
Libraries & Tools:	Tanstack Query, GraphQL, Zustand, TailwindCSS, React hook form, Motion
Databases & CMS:	MongoDB, Convex, Supabase, Firebase, Sanity
Web3:	Ethers.js, Viem, Porto.sh, Tenderly, EVM, Bitcoin, Tron, Near
